NOPE India Research - Nine-Part Report

Prepared by Instinct for Heet Sanghvi · All sources read 9 November 2026 (IST) unless a different date is shown.

> **Scope and method.** Read-only public research. No logins, sign-ups, payments, OTP requests, carts, purchases, filings or messages were performed. Each item below gives the answer, the source URL, the date read, a short quote from the source, and a confidence level (high / medium / low). Where something could not be confirmed, it is stated plainly rather than guessed. Screenshots of the trademark access barriers and marketplace pages requested in the brief are in the appendix. This report is research, not legal, tax or trademark advice.

Item 1 - Google Play Console: closed testing rule for new personal accounts, and the developer fee

Answer. For personal developer accounts, before applying for production access an app must run a closed test with **at least 12 testers, opted in continuously for the preceding 14 days**. The developer account registration fee is **US$25, one-time**. An INR fee amount was not found on the checked official fee page; the page states the fee in US dollars only, so the INR charge is **unverified** (no INR figure is claimed either way).

Sources (read 9 Nov 2026):

• App testing requirements for personal developer accounts - https://support.google.com/googleplay/android-developer/answer/14151465

• Get started with Play Console - https://support.google.com/googleplay/android-developer/answer/6112435

> "At least 12 testers must be opted in to your closed test when you apply for production access, and they must have been opted in continuously for the preceding 14 days."

> "There is a US$25 one-time registration fee."

Confidence: High for the 12-tester / 14-day rule and the US$25 fee as stated on the official pages. Unverified for any INR amount.

Item 2 - Google Play AccessibilityService policy: can an app blocker use it, what disclosure is required, and the disable/uninstall rule

Answer. An app that blocks other apps **can be eligible** to use the AccessibilityService API, **subject to policy and Google Play review** - this is not a categorical approval. Google Play says it "permits the use of the AccessibilityService API across a wide range of applications". However, an app blocker is **not** an "accessibility tool" (automation tools are explicitly named as not accessibility tools), so it must meet the full non-tool requirements, and the Play Console declaration and review process decides:

- **Prominent in-app disclosure and consent:** the disclosure must be inside the app (not only the store description, website or privacy policy), shown in normal usage without navigating menus, describe the data accessed or collected through the API, explain how it is used or shared, require affirmative action (tap or tick), and be a separate standalone disclosure.
- **Play Console declaration:** apps targeting API 31+ that use an AccessibilityService must complete the accessibility declaration, including why the API is needed and a video showing the disclosure and consent flow.
- **Listing documentation:** the use of the Accessibility API must be documented in the Google Play listing.
- **Automation limit:** deterministic, rule-based automation (a static human-defined script, e.g. "if trigger X, perform action Y") is allowed. Any use that lets an app autonomously initiate, plan and execute actions or

decisions is strictly prohibited.

- **Narrower APIs first:** apps must use more narrowly scoped APIs and permissions instead of the Accessibility API where possible.

Disable/uninstall rule. Yes, the policy forbids it: the Accessibility API cannot be used to change user settings without permission **or to prevent users from disabling or uninstalling any app or service**, unless authorized by a parent/guardian through a parental control app or by authorized administrators through enterprise management software.

Related outer bound. The separate Device and Network Abuse policy prohibits apps that interfere with, disrupt or access other apps on the device in an unauthorized manner; a blocker operates through the sanctioned accessibility route with user consent.

Sources (read 9 Nov 2026; pages show no publish date and are live/current - the permissions policy page notes upcoming changes effective January 27, 2027):

• Use of the AccessibilityService API - https://support.google.com/googleplay/android-developer/answer/10964491

• Permissions and APIs that Access Sensitive Information - https://support.google.com/googleplay/android-developer/answer/16558241

• Device and Network Abuse - https://support.google.com/googleplay/android-developer/answer/9888379

> "Other examples of apps that are not accessibility tools are: antivirus software, automation tools, assistants, monitoring apps, cleaners, password managers, and launchers."

> "We are not blocking use of this API, but we will require prominent disclosure of the API's use for any app that is not an accessibility tool."

> "Any use of the Accessibility API that enables an app to autonomously initiate, plan, and execute actions or decisions is strictly prohibited. This does not prohibit deterministic, rule-based automation..."

> "The Accessibility API cannot be used to: Change user settings without their permission or prevent the ability for users to disable or uninstall any app or service unless authorized by a parent or guardian through a parental control app or by authorized administrators through enterprise management software;"

Confidence: High.

Item 3 - Android 13+ "restricted settings" for sideloaded APKs and accessibility access

Answer. When an app installed from a source Android may treat as dangerous (an APK downloaded through a browser or messaging app, or from a local file, rather than an app store) tries to obtain a protected setting such as accessibility access, Android **may** restrict it: not every sideloaded install is necessarily treated as restricted, and the AOSP source notes that which apps count as restricted "is an implementation detail of ECM". For an app that is restricted, the user is shown a **"Restricted setting" dialog with no "allow" button**, only a link to a screen with intentionally obscure instructions. To grant access, the user must deliberately:

1. Open **Settings > Apps > [the app]**.
2. Tap the **More (three-dot) menu** and choose **"Allow restricted settings"**, then follow the on-screen instructions.
3. Go back to Settings > Accessibility and enable the service again; the normal permission prompt then appears and can be allowed.

Android's user-help page states these steps apply to **Android 13 and up**. The Android 15 and Android 17 Compatibility Definition Documents require devices to implement Restricted Settings for accessibility (among

other protected settings) and to allow the user confirmation only from the app's AppInfo page via the EnhancedConfirmationManager (ECM) API. The AOSP source for ECM describes the exact flow above.

Sources (read 9 Nov 2026):

• Learn about restricted settings (Android Help) - https://support.google.com/android/answer/12623953
• AOSP EnhancedConfirmationManager.java (android-35) - https://android.googlesource.com/platform/prebuilts/fullsdk/sources/+/refs/heads/androidx-xr-arcore-release/android-35/android/app/ecm/EnhancedConfirmationManager.java
• Android 15 CDD - https://source.android.com/docs/compatibility/15/android-15-cdd (same text in the Android 17 CDD)

> "ECM is a feature that restricts access to protected settings ... by restricted apps (apps from from dangerous sources, such as sideloaded packages or packages downloaded from a web browser)." [sic in source]

> "The user is presented with a "Restricted setting" dialog explaining that the attempted action has been restricted. (No "allow" button is shown, but a link is given to a screen with intentionally-obscure instructions on how to proceed.) ... The user then must click on "..." (top-right corner hamburger menu), then click "Allow restricted settings""

> "Some of these steps work only on Android 13 and up." (Android Help)

Caveat: the developer.android.com reference page for EnhancedConfirmationManager could not be retrieved (no readable page), and no Android 13/14-era first-party developer document describing the exact trigger was found; the CDD text quoted is from the Android 15 and 17 documents. The Android 13+ coverage above rests on Google's user-help page plus AOSP source.

Confidence: High for the user flow and its effect. Medium for the Android 13/14 precise trigger wording, because the first-party developer document for those versions was not retrievable.

Item 4 - IP India trademark search: "NOPE" in Classes 9, 35, 42, and the official filing fee

Answer - search results: NOT VERIFIED. Both official public trademark search routes currently require a login before any search can be run: the public search page asks for an OTP login (email or mobile), and the linked official AI-search portal asks for an email/mobile number and password. Under the read-only, no-login restriction, **no search could be submitted for NOPE in Class 9, Class 35 or Class 42**. There are no hit counts, marks, application numbers, owners or statuses from this check. **This does not mean zero results, and it does not mean NOPE is clear to use.** Screenshots of the two login barriers are in the appendix (figures 1 and 2). Even a future exact-wordmark result would not by itself establish clearance; similarity and goods/services scope are separate questions.

Answer - official fee. Form TM-A, for an applicant who is an Individual / Startup / Small Enterprise: **Rs 4,500 per mark per class for e-filing, Rs 5,000 physical**. For one wordmark filed in all three classes by e-filing, the official fees would therefore be **Rs 13,500**. This is an official-fee figure, not a professional-service quote and not a filing action.

Sources (read 9 Nov 2026):

• Public search (OTP login barrier) - https://tmrsearch.ipindia.gov.in/tmrpublicsearch
• Official AI trademark search portal (account login barrier) - https://tmsearch.ipindia.gov.in/ords/r/tisa/trademark_search600/login
• IP India forms and official fees - https://www.ipindia.gov.in/pages/trade-marks/learn/forms-and-official-fees

> "Where the applicant is an Individual / Startup/Small Enterprise"; physical "5,000", e-filing "4,500"; "Fee is for each class and for each mark."

Confidence: High for the access limitation and the official fee. Unverified for all trademark search results.

Item 5 - GST: likely HSN and rate for a plastic enclosure with a passive NFC tag; registration threshold for selling goods online

Answer - classification and rate (working candidate, not a ruling). The working candidate is heading **8523** (recording media / smart cards) at **18%** GST per the CBIC-hosted Notification 9/2025 (Integrated Tax Rate) schedule; an ordinary plastic article under heading **3926** is also generally 18% with specific exceptions. Neither entry determines the classification of this assembled product. The exact 8-digit HSN, and the treatment of any bundled app or subscription, are **not confirmed**, and a full official amendment-chain audit after the September 2025 schedule was not completed. Do not invoice on the basis of this research alone; the product needs a classification review.

Answer - registration threshold. There is **no universal rule** that every online goods seller must register from the first sale. Under **Notification 34/2023** (effective 1 October 2023), an eligible below-threshold person can supply goods through a TCS-collecting marketplace without GST registration, only if all conditions are met: no inter-State supply; goods through the marketplace in no more than one State/UT; PAN; PAN, place-of-business address and State/UT declared on the common portal before supplies; successful validation and an enrolment number before supplies; at most one enrolment number per State/UT; and the enrolment lapses on later registration. The standard goods-only threshold is **Rs 40 lakh** in most states and **Rs 20 lakh** in Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Puducherry, Sikkim, Telangana, Tripura and Uttarakhand (per CBIC's 1 June 2019 update; current section 22 also reflects the Rs 40 lakh goods-only limit). This is a conditional exemption from registration, not permission to charge GST without registering. Do not assume Rs 40 lakh for every state or for a goods-plus-services business: if NOPE separately sells taxable app subscriptions, the goods-only enhanced threshold cannot be assumed, and a direct-sales website is not the same route as a TCS marketplace. Every state's current enabling notification was not revalidated for 2026.

Sources (read 9 Nov 2026):

• CBIC-hosted Notification 9/2025 Integrated Tax (Rate) PDF - https://courier.cbic.gov.in/ECCS/advisory/2025/NOTIFICATION%20NO.%209_2025-INTEGRATED%20TAX%20(RATE)%20-1759486719.pdf
• CGST Act section 22 (current, CBIC tax repository) - https://taxinformation.cbic.gov.in/content/html/tax_repository/gst/acts/2017_CGST_act/active/chapter6/section22_v1.00.html
• CBIC "GST - An Update" (1 June 2019) - https://cbic-gst.gov.in/pdf/01062019-GST-An-Update.pdf
• Notification 34/2023 (actual CBIC notification, GST Council host) - https://gstcouncil.gov.in/sites/default/files/2024-05/gst-ct-34-2023.pdf
• GSTN new functionalities compilation - https://tutorial.gst.gov.in/downloads/news/new_functionalities_compilation_april_2023_march_2024.pdf

> "18 per cent. in respect of goods specified in Schedule II"; entry 495, heading 8523: "Discs, tapes, solid-state non-volatile storage devices, "smart cards" and other media for the recording of sound or of other phenomena". Entry 127 covers other articles of plastics, with exceptions.

> "such persons shall not make any inter-State supply of goods" (Notification 34/2023)

Confidence: Medium for 8523 as the likely heading (working inference). High for 18% in the cited 2025 schedule (not a product-specific ruling). High for the existence and conditions of the marketplace exemption. Medium for applying any threshold to NOPE without the seller state, turnover and goods/services mix.

Item 6 - Legal Metrology (Packaged Commodities) Rules: mandatory retail-box declarations

Answer - baseline checklist for an ordinary non-food, pre-packed retail NFC product (Rule 6, consolidated rules current through 24 December 2024, with later amendments read through 21 September 2026):

- Manufacturer's name and address; if the packer differs, both. Imported package: importer's name/address as applicable.
- Imported product: country of origin / manufacture / assembly.
- Common or generic name of the product (for multi-product packages, name and number/quantity of each).
- Net quantity in standard weight/measure, or count where sold by number (e.g. "1 unit" only if factually correct).
- **Month and year of manufacture.** The older FAQ's "manufacture or pre-pack or import" alternatives are stale: since 1 January 2024 (after extensions) the manufacture month/year is required. Electronic products/spares/accessories may show it anywhere on the retail package if visible and clearly legible.
- MRP in Indian currency, **inclusive of all taxes**.
- Consumer complaint contact: name, address, telephone number and email of the person/office for complaints.
- Dimensions, if size is relevant.
- Unit sale price (rupees, two decimals, per unit) where sold by number, with exceptions (including when MRP equals the unit sale price, and combination/multi-piece packages; a genuine single-unit pack may fall under the first exception - no artwork was supplied to assess it).
- Best-before/use-by applies only where a commodity can become unfit for human consumption over time; a passive NFC tag has no general expiry-date requirement.

Declarations must also meet principal-display-panel, visibility, grouping and type-size rules. The rules allow specific QR-code alternatives for certain electronic-product details with required on-box notices, but that is not blanket permission to move every mandatory declaration behind a QR code, and whether this passive-tag product qualifies for that route was not confirmed. The checklist above assumes ordinary printed declarations; it is not a reviewed print-ready label.

Sources (read 9 Nov 2026):
• Department of Consumer Affairs consolidated Legal Metrology rules book (through 24 Dec 2024) - https://doca.gov.in/lm-ebook/wp-content/uploads/2024/12/FInal-Book-Legal-Metrology-with-amendments.pdf
• Amendment list page - https://consumeraffairs.gov.in/pages/legal-metrology-act
• Later amendments individually read (none change the ordinary NFC-box baseline): medical-device declarations (2025); pan-masala exemption (2 Dec 2025); ecommerce country-of-origin filter (13 Feb 2026) and its substitution effective 1 Jul 2027 (27 Apr 2026); bon ded warehouses / AEO labels (29 May 2026); red/green dot for cosmetics and toiletries (21 Sep 2026).

> "Every package shall bear thereon or on label securely affixed thereto, a definite, plain and conspicuous declaration"; "maximum retail price inclusive of all taxes".

Confidence: High for the baseline declarations. Medium for final product-specific artwork compliance, which was not supplied or reviewed.

Item 7 - Competitors: Brick price and shipping to India; NFC app blockers on Amazon.in and Flipkart; Opal and Unpluq pricing

Brick (getbrick.com)

Field	Finding	Quote / source	Confidence
Price	US$59 for one Brick; cases $39; Mount $15; 10% off plus free shipping on 2+ Bricks	"Add to Cart • $59" - https://getbrick.com/products/grey-brick (9 Nov 2026)	High
Price for India	Still shown in USD ($59). No INR price shown even after selecting India.	"Deliver to Maharashtra, India" - same page after choosing India + postal code 400067 (appendix figures 5-6)	High

India delivery estimate	Mon 23 Nov to Fri 27 Nov 2026	"Estimated delivery: Mon, Nov 23-Fri, Nov 27" - same page. This is the estimate shown for that entered locality (Mumbai 400067) on that day, not a guaranteed India-wide delivery window.	High for what the page showed
India shipping cost, duties, taxes	NOT shown without entering cart/checkout, which was not done (read-only). Unverified.	-	Unverified
Ships to India?	Brick says it ships worldwide; India is not named in its policy pages, and its named seller-of-record list (Passport Global: EU, UK, Australia, NZ, Norway, Singapore, Switzerland) does not include India. Warehouses: US, EU (Netherlands), Australia, Canada.	"Yes! We ship worldwide" (FAQ); "The majority of countries have duties and taxes 'prepaid' in cart." (international shipping policy); https://getbrick.com/policies/shipping-policy	High for the text; India specifics unverified
Free shipping	Free shipping on orders over $75	"Free Shipping on orders over $75" - product page	High

Second-hand INR figures for Brick in India exist on a rival vendor's blog (the author sells a competing product, updated 30 Oct 2026). They are not relied on here: no first-party verified INR price or India shipping figure was found, and that verified gap is the finding.

Opal (subscription software, no NFC tag)

First-party India App Store page (https://apps.apple.com/in/app/opal-screen-time-control/id1497465230, 9 Nov 2026) shows "Free · In-App Purchases", but the INR plan prices did not load, so first-party INR pricing is unverified. Rival-blog INR figures (yearly and monthly plan amounts, Oct 2026) are second-hand and biased; not relied on. Per the same rival source, USD pricing is Pro $99.99/yr, $19.99/mo, $399 lifetime - also second-hand.

Unpluq

First-party India App Store page (https://apps.apple.com/in/app/unpluq-reduce-screen-time/id1673743726, 9 Nov 2026) shows **"Unpluq Premium Monthly ₹ 499"** and **"Unpluq Premium Yearly ₹ 4,999"** (high confidence for these in-app prices). The website (https://www.unpluq.com/products/premium-subscription, 9 Nov 2026) shows **"Premium Subscription $29.00"** in USD; the page text did not state the billing period, so $29.00 must not be read as monthly or yearly (high that $29.00 is shown; period unknown). FAQ: works on "Android devices with NFC support".

Other products named by sources (not price-checked)

Spark (heyspark.work), bloc (letsbloc.com, fridge-style blocker, India), BLOCC tag (getblocc.com), Monk (monktag.com, EUR 54.95 incl. VAT per its own blog), and free NFC blocker apps TapBlok, nfcGuard and Foqos.

Amazon.in

Could not be verified: Amazon pages would not load during this research session (a plain page fetch also returned empty content), so there are **no Amazon.in titles, prices, ratings, review counts or screenshots**. This means unverified, not absent.

Flipkart (signed out, page 1 only, 9 Nov 2026)

Flipkart rewrites some queries on its own; the table records what it actually searched. Where Flipkart offered "show results for [original wording] instead", that option was not clicked, so exact-wording results are unchecked.

Query typed	What Flipkart searched	What page 1 showed	Screenshot

nfc app blocker	"nfc blocker" (auto-rewritten; 3,917 results)	Earbuds, privacy screen guards, NeoSapien Neo 1 AI wearable ₹12,146 (3.3 stars, 7 ratings)	Fig. 7, 9
phone focus tag nfc screen time	As typed (4,813 results)	Screen guards for phones	Fig. 8
nfc focus tag	"nfc focus" (auto-rewritten; 44,283 results)	Blank NFC stickers: Zeswin NFC Sticker RFID NFC Tag 144 Bytes ₹239 (3.8 stars, 4 ratings); ₹394 (pack of 30); linqs NTAG213 Rewritable NFC Tag Sticker ₹344 (3.8, 5 ratings) and ₹257 (3.8, 40 ratings)	Fig. 10
brick phone blocker	As typed (28,679 results)	Piggy banks / money boxes	Fig. 11

Conclusion. No NFC app blocker or Brick-like focus product was seen on page 1 of these Flipkart searches. Blank NFC stickers are sold but are not blockers. This does not prove none exist deeper in results or under other wording. **Confidence: medium** for the page-1 observation only.

Item 8 - Share of Android phones in India with NFC, especially under ₹15,000

Answer: no published figure was found. Do not state a percentage.

- Omdia sells a "Smartphone Feature Penetration Database" that includes NFC (published 26 Sep 2025), but it is paywalled with no numbers visible, and whether it splits India Android by price tier could not be confirmed: https://omdia.tech.informa.com/om139268/smartphone-feature-penetration-database-battery--others--2q25
- Counterpoint's NFC penetration report is global and from 2018, paywalled; no India figure seen: https://counterpointresearch.com/en/reports/nfc-capable-smartphones-global-sales-oem-and-market-penetration-analysis
- IDC and CMR India trackers publish shipment / 5G / price-band data; no NFC split found.
- Qualitative only, low confidence, non-research blog (8 Aug 2026): "Below that it becomes a model-by-model lottery" - https://profiletap.io/in/blog/phones-with-nfc-india
- Catalogue counts, not shares: 91mobiles lists NFC phones from Rs 9,799 (https://www.91mobiles.com/list-of-phones/android-phones-with-nfc, 9 Nov 2026).

Confidence: High that no usable public share was found in this pass; the real number is unverified.

Item 9 - Meta ads in India: typical CPC and CPM for ecommerce

Terminology. CPM is cost per 1,000 **impressions** (not views); CPC here is cost per link click.

Source	Date / scope	CPM	CPC	Reliability

Superads public dataset - superads.ai/facebook-ads-costs/cpm-cost-per-mille/india and .../cpc-cost-per-click/india	Read 9 Nov 2026; data Jul 2025 - Jul 2026; ALL industries, India, medians, USD only	"India's median CPM averaged about $1.35" (low $0.36 Feb 2026, high $5.02 Jul 2026)	"India's median CPC averaged about $0.10 per click" (low $0.025, high $0.209)	Medium. Largest dataset ("$3B worth of advertising data") but Superads users only, not ecommerce-specific, with large monthly swings suggesting thin data.
Boring Commerce - boringcommerce.com/benchmarks/meta-ads-india	Nov 2026; data Apr 2025 - Nov 2026; Indian D2C accounts the agency manages/audits	"The median CPM was ₹120 per 1,000 impressions, with the middle half of brands between ₹67 to ₹248"	Not given	Medium-low. Some band tables look odd (₹83 under ₹25L/yr spend vs ₹240 at ₹25L-1Cr; ₹214 vs ₹113 by order value) with small groups; use only the overall median.
ProfitBox360 - profitbox360.com/research/india/ecommerce/ecommerce-ad-benchmarks-cac-cpm-roas-india	19 Sep 2026; Indian D2C ecommerce, "2025 averages across Indian Meta ad accounts"	"1,000 impressions cost about ₹210"	"a link click ₹11.25"	Medium-low. Sample size and method not shown on the page.
AdsSarthi - adssarthi.com/blog/d2c-performance-marketing-benchmarks-india-2026.html	13 May 2026; D2C by category, "median ranges", spend ₹2L-₹50L/month	Fashion ₹80-140; beauty ₹100-180; electronics "can spike to ₹200-300 during festival season"	Fashion ₹5-10	Low-medium. No named dataset.
Roundup of five vendors - digitalwebmania.com/blog/meta-ads-cost-india-2026/	3 Nov 2026; mixed	Adligator ₹95-266; AdAmigo ~₹247; Vaizle ₹210; OwlClaw ₹50-120	AdAmigo ~₹19; Vaizle ₹34; OwlClaw ₹8-25	Low-medium. Agency roundup with differing methods; it says "Treat any single India number as a rough guide".

Summary. For India ecommerce/D2C, vendor figures put CPM roughly at **₹120 to ₹210** (single sources span ₹50 to ₹280). For CPC, only ProfitBox360 gives an ecommerce-specific figure (₹11.25 per link click); Superads gives

an all-industry median of about $0.10. No ecommerce-only primary dataset and no Meta-published India figure was found; no combined CPC range is claimed. Varos: no public India page found.

Confidence: Low-medium overall.

Final summary table

#	Item	Answer (short)	Key sources	Read	Confidence
1	Play Console closed testing + fee	New personal accounts: closed test with at least 12 testers opted in continuously for the preceding 14 days before production access. Fee US$25 one-time. INR amount not found on the official fee page - unverified.	support.google.com answers 14151465, 6112435	9 Nov 2026	High (rules/fee); INR unverified
2	AccessibilityService policy for an app blocker	Can be eligible, subject to policy and Play review - not as an "accessibility tool": prominent in-app disclosure + affirmative consent, Play Console declaration with video, listing documentation, narrower APIs first, deterministic automation only (no autonomous actions). Policy forbids preventing users from disabling/uninstalling any app (parental-control / enterprise exceptions).	support.google.com answers 10964491, 16558241, 9888379	9 Nov 2026	High
3	Android 13+ restricted settings (sideloaded APKs)	If a sideloaded install is treated as restricted (not all necessarily are; which apps count is an ECM implementation detail and the exact Android 13/14 trigger is unverified), requesting accessibility shows a "Restricted setting" dialog with no allow button. User allows via Settings > Apps > [app] > More > "Allow restricted settings", then re-enables the service. Applies to Android 13 and up per Google's help page; CDD mandates it from Android 15 documentation.	support.google.com/android/answer/12623953; AOSP ECM source (android-35); Android 15/17 CDD	9 Nov 2026	High (flow); medium (Android 13/14 first-party dev doc not retrievable)

4	Trademark NOPE, classes 9/35/42 + fee	Search NOT VERIFIED - both official routes require login (OTP or account), no query could be run; not zero and not cleared. Fee: TM-A individual/startup/small enterprise Rs 4,500 e-filing / Rs 5,000 physical per mark per class; 3 classes = Rs 13,500 e-filing (official fees only).	tmrsearch.ipindia.gov.in; tmsearch.ipindia.gov.in; ipindia.gov.in fees page	9 Nov 2026	High (limitation, fee); results unverified
5	GST HSN/rate + registration threshold	Working candidate heading 8523 at 18% (3926 plastics also generally 18%); exact 8-digit HSN and current amendment chain unconfirmed - not a ruling. Registration: no first-sale rule; Notification 34/2023 gives conditional marketplace exemption for below-threshold intrastate goods sellers; goods-only threshold Rs 40L most states, Rs 20L in ten listed states.	CBIC 9/2025 rate PDF; CGST s.22; CBIC 2019 update; Notification 34/2023	9 Nov 2026	Medium-high per element
6	Legal Metrology box declarations	Baseline: manufacturer/packer/importer identities; country of origin if imported; generic name; net quantity/count; month+year of manufacture (mandatory since 1 Jan 2024); MRP inclusive of all taxes; complaint contact; dimensions if relevant; unit price where required; no expiry needed for passive NFC.	DoCA consolidated rules book + 2025/2026 amendments	9 Nov 2026	High (baseline)
7	Competitors	Brick $59 (USD only, no INR shown), India delivery estimate 23-27 Nov 2026 for entered locality 400067, shipping/duties unverified. Unpluq ₹499/mo, ₹4,999/yr (India App Store); site shows $29.00, period unstated. Opal INR not loaded. Amazon.in could not be loaded - unverified, not absent. Flipkart page 1: no blocker product; queries auto-rewritten, exact-wording option not opened - no absence proof.	getbrick.com; apps.apple.com/in; unpluq.com; flipkart.com	9 Nov 2026	High where stated; gaps as listed

8	NFC share, India Android	No published share found; do not quote a percentage. Omdia database paywalled (India price-tier split unconfirmed); Counterpoint 2018 global paywalled; IDC/CMR no NFC split; catalogue counts only (NFC phones listed from Rs 9,799).	omdia.tech.informa.com; counterpointresearch.com; 91mobiles.com	9 Nov 2026	High that none found; figure unverified
9	Meta ads India benchmarks	Vendor CPM roughly ₹120-₹210 per 1,000 impressions for India D2C (all-industry median $1.35 per Superads); ecommerce-specific CPC only ₹11.25 (ProfitBox360); all-industry median CPC ~$0.10. CPM = per 1,000 impressions, not views. No ecommerce-only primary dataset or Meta-published India figure.	superads.ai; boringcommerce.com; profitbox360.com; adssarthi.com; digitalwebmania.com	9 Nov 2026	Low-medium

What could not be verified

1. Any INR figure for the Play Console developer registration fee (the checked official fee page states US$25 only).
2. A first-party Android 13/14 developer document for the exact restricted-settings trigger (the ECM reference page was not retrievable; CDD text used is Android 15/17).
3. NOPE trademark search results in Classes 9, 35 or 42 - application identifiers, owners, statuses, or any brand clearance - because both official routes require login and no search was executed. This is not a "clear" result.
4. The exact 8-digit HSN of the assembled product; whether enclosure/tag/app license form a different or composite supply; any product-specific GST ruling.
5. A full current official GST goods-rate amendment-chain audit after the cited September 2025 CBIC schedule.
6. NOPE's applicable GST threshold without the seller State/UT, PAN-wide turnover, supply mix and interstate/marketplace plan; not every state's current enabling notification was revalidated.
7. Print-ready Legal Metrology compliance, QR-only eligibility and declaration typography (no actual package, dimensions or legal-entity details supplied).
8. Brick's India shipping cost, duties/taxes and INR price (requires cart/checkout, which was not done); India is not named in Brick's policy pages.
9. Amazon.in listings of any kind (pages would not load) - unverified, not absent.
10. Flipkart beyond page 1, and Flipkart results for the exact typed wording where Flipkart auto-rewrote the query.
11. Opal's INR plan prices from a first-party source (page showed "Free · In-App Purchases" but plan prices did not load).
12. The billing period / variant of Unpluq's $29.00 website price.
13. Any published NFC share for India Android, especially under ₹15,000.
14. An ecommerce-only primary Meta ads benchmark for India, or any Meta-published India figure.

Appendix - screenshots (all taken 9 Nov 2026, signed-out public pages)

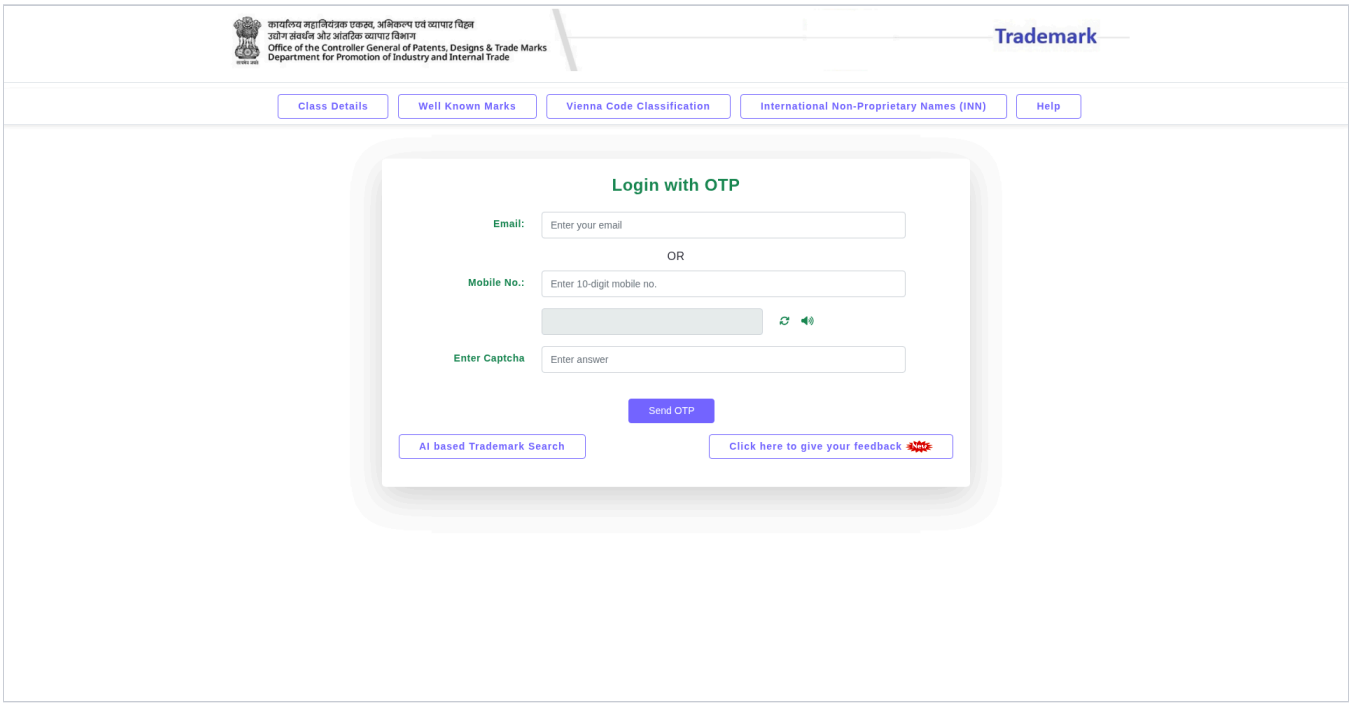

Fig. 1 - IP India public trademark search (tmrsearch.ipindia.gov.in): "Login with OTP" barrier. No search form is reachable without login, so no NOPE query was run.

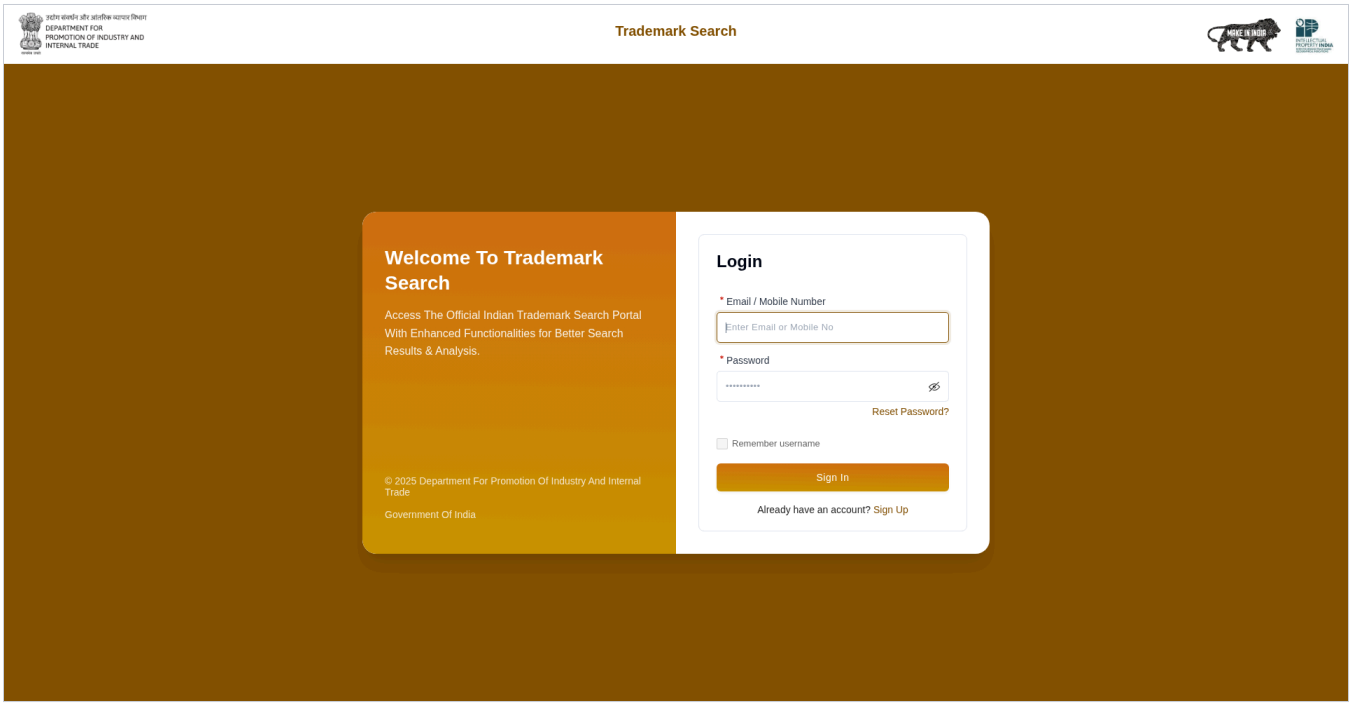

Fig. 2 - Official AI trademark search portal (tmsearch.ipindia.gov.in): email/mobile + password sign-in barrier. No input was entered.

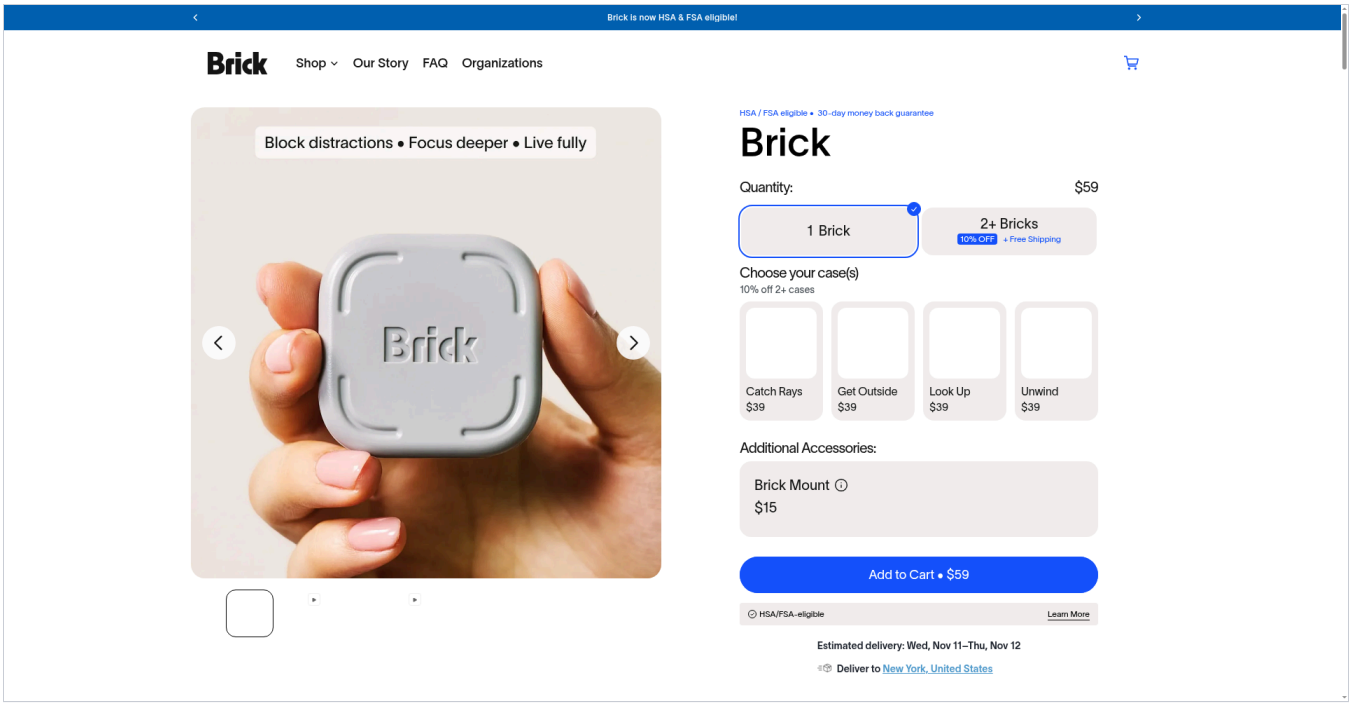

Fig. 3 - Brick product page, default view: "Add to Cart • $59".

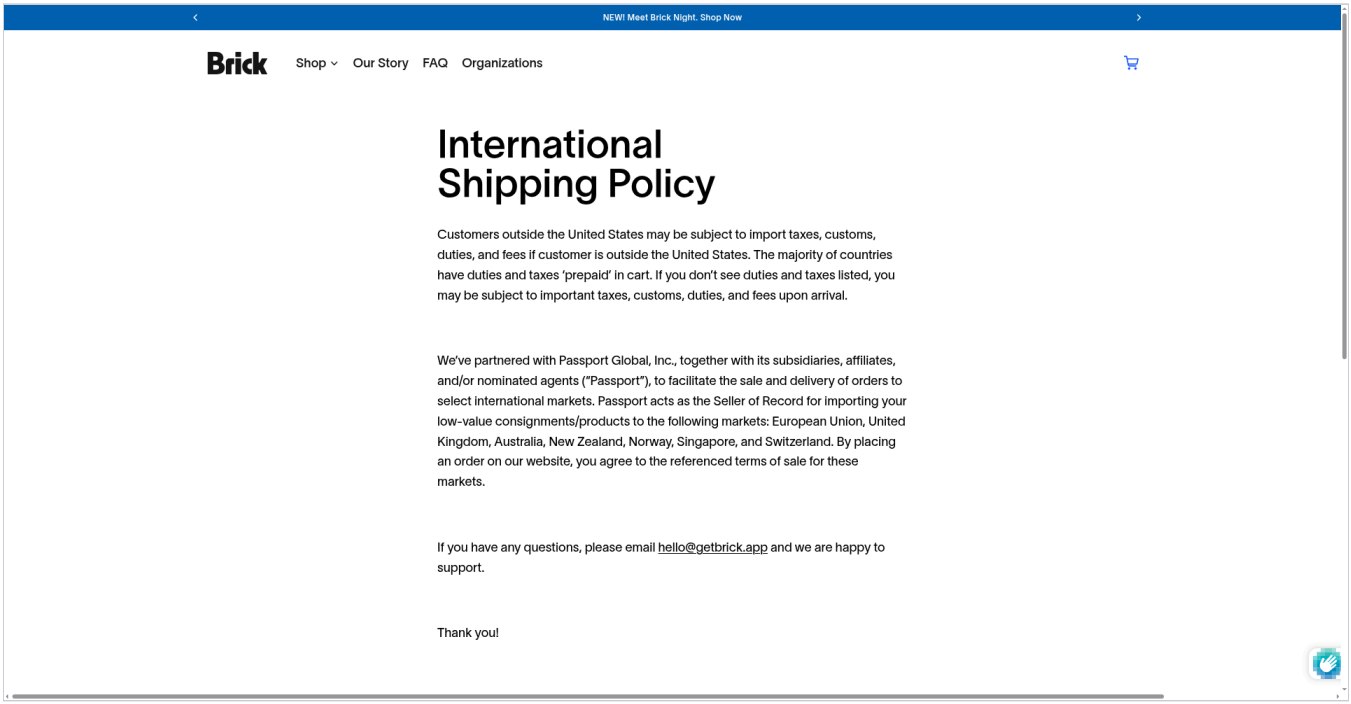

Fig. 4 - Brick international shipping policy page: duties/taxes "prepaid" in cart for most countries; India not named.

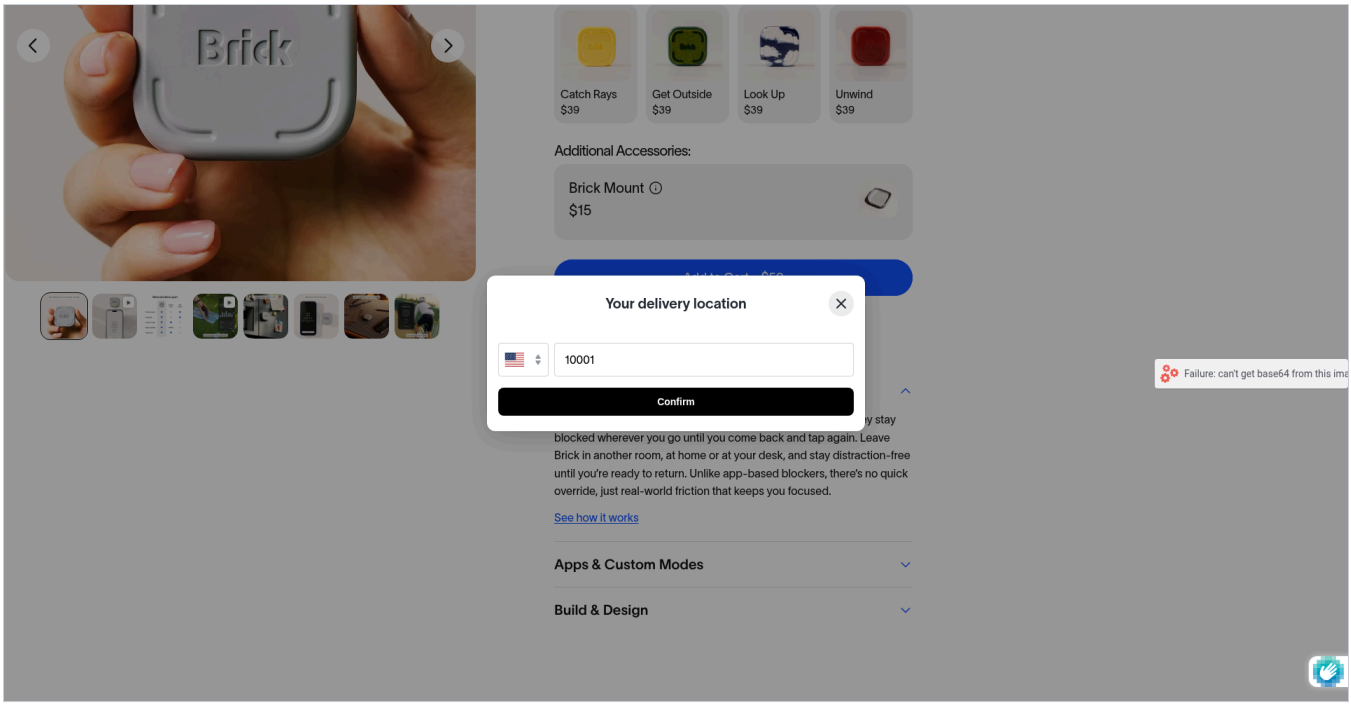

Fig. 5 - Brick delivery-location form asking for country and postal code.

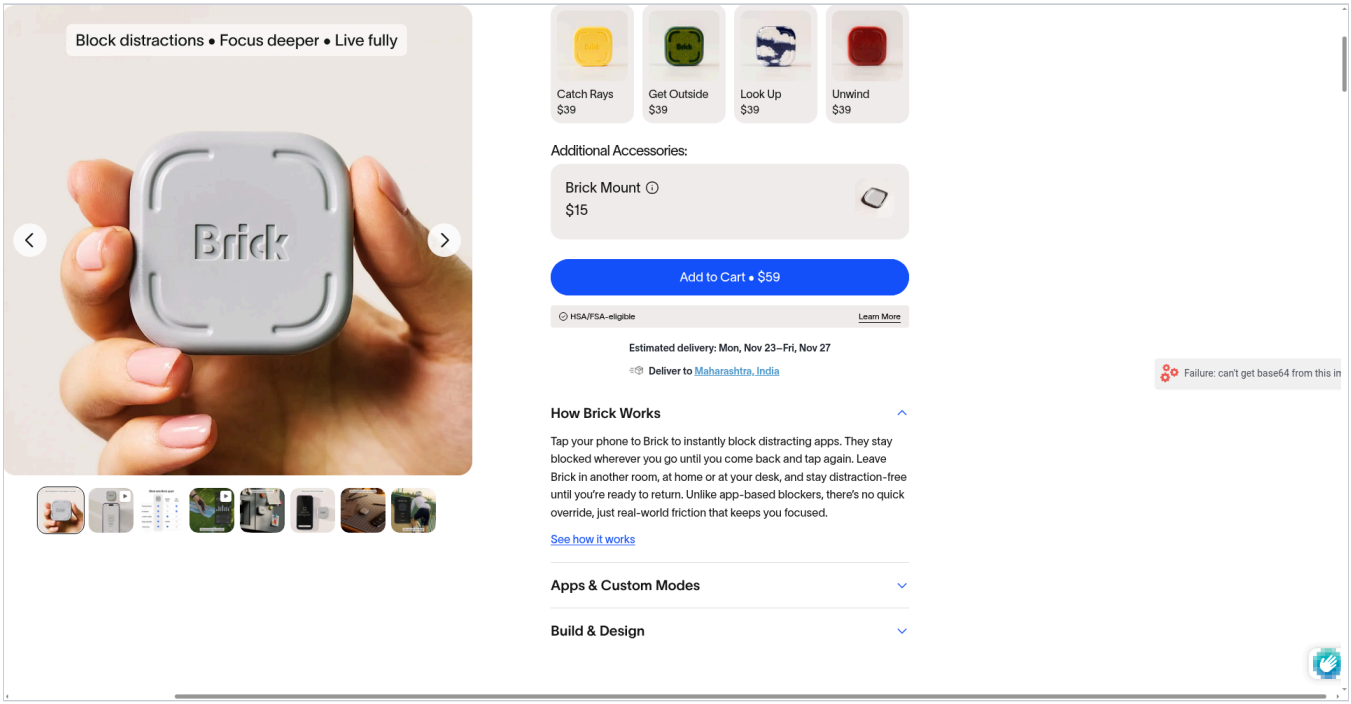

Fig. 6 - Brick product page after selecting India + postal code 400067: "Deliver to Maharashtra, India" and "Estimated delivery: Mon, Nov 23-Fri, Nov 27". Price remains USD. Estimate context for that locality only, not a guaranteed India-wide window.

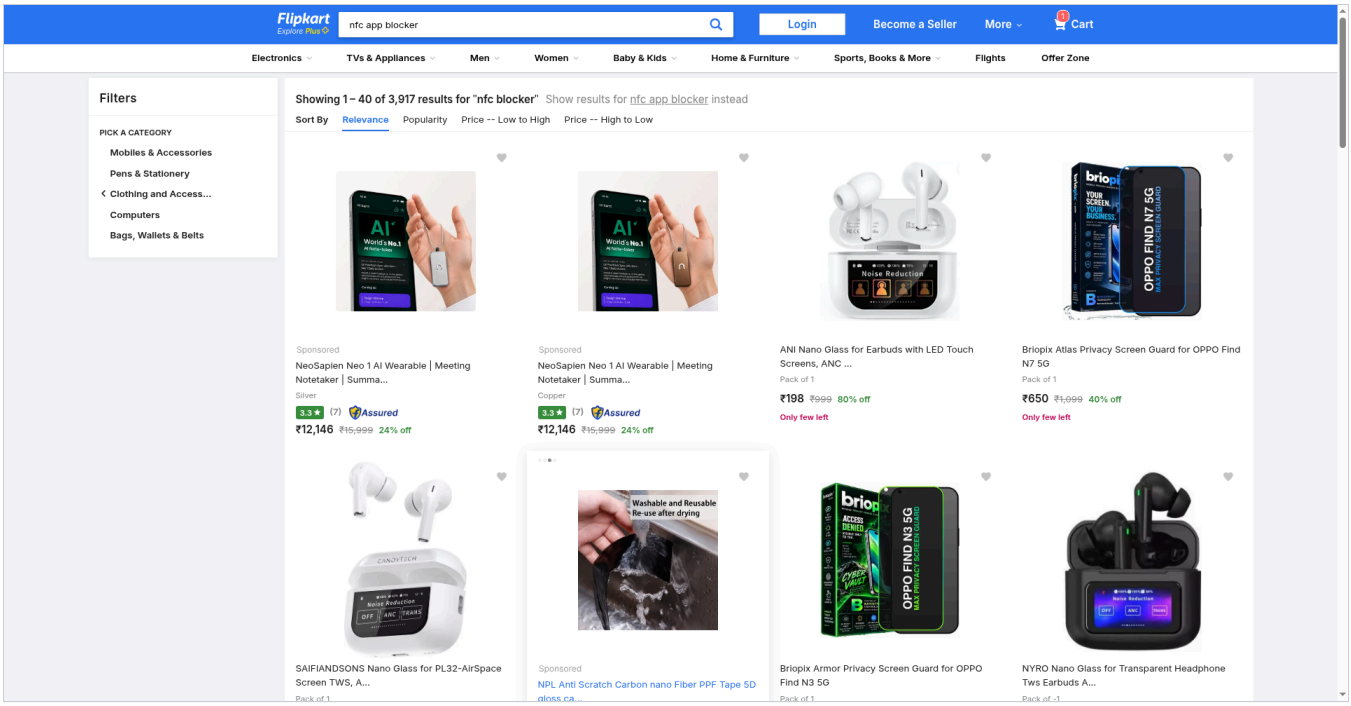

Fig. 7 - Flipkart: typed "nfc app blocker", auto-rewritten to "nfc blocker" (3,917 results). Page 1 shows unrelated products; "Show results for nfc app blocker instead" was offered and not clicked.

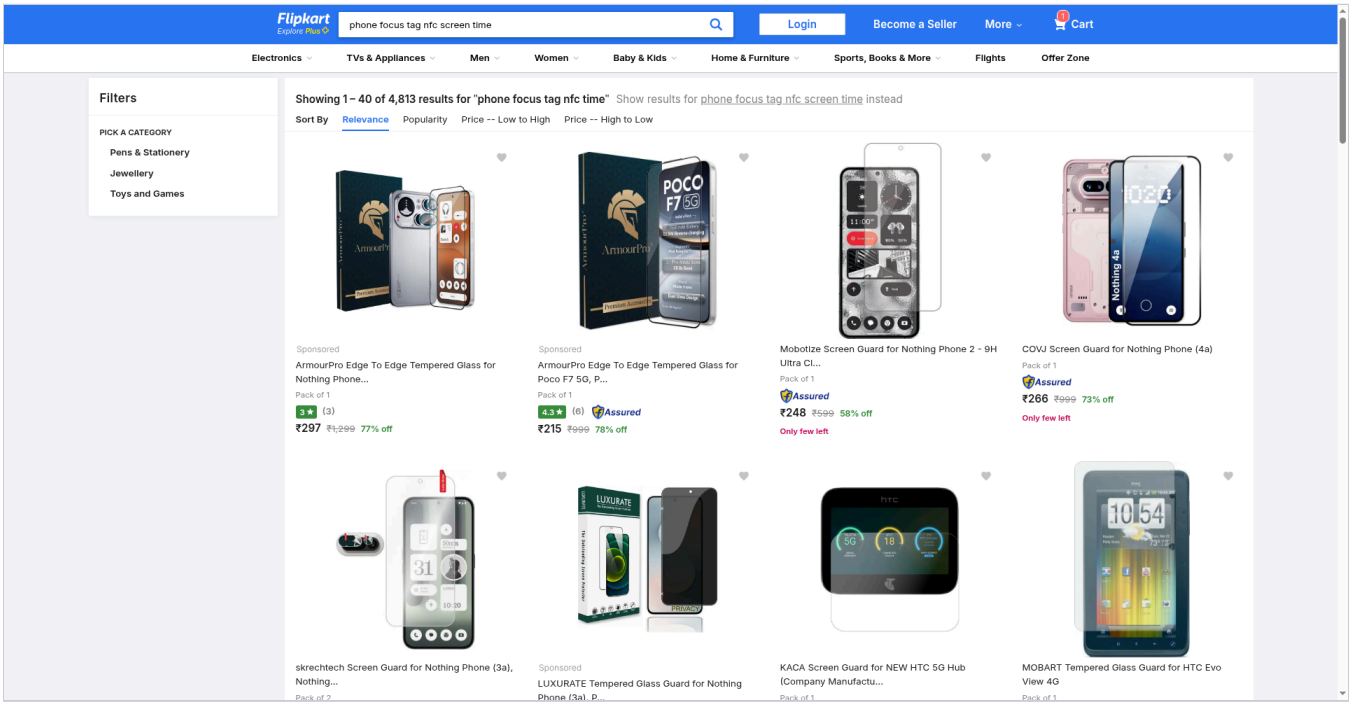

Fig. 8 - Flipkart: "phone focus tag nfc screen time" searched as typed (4,813 results); page 1 shows screen guards.

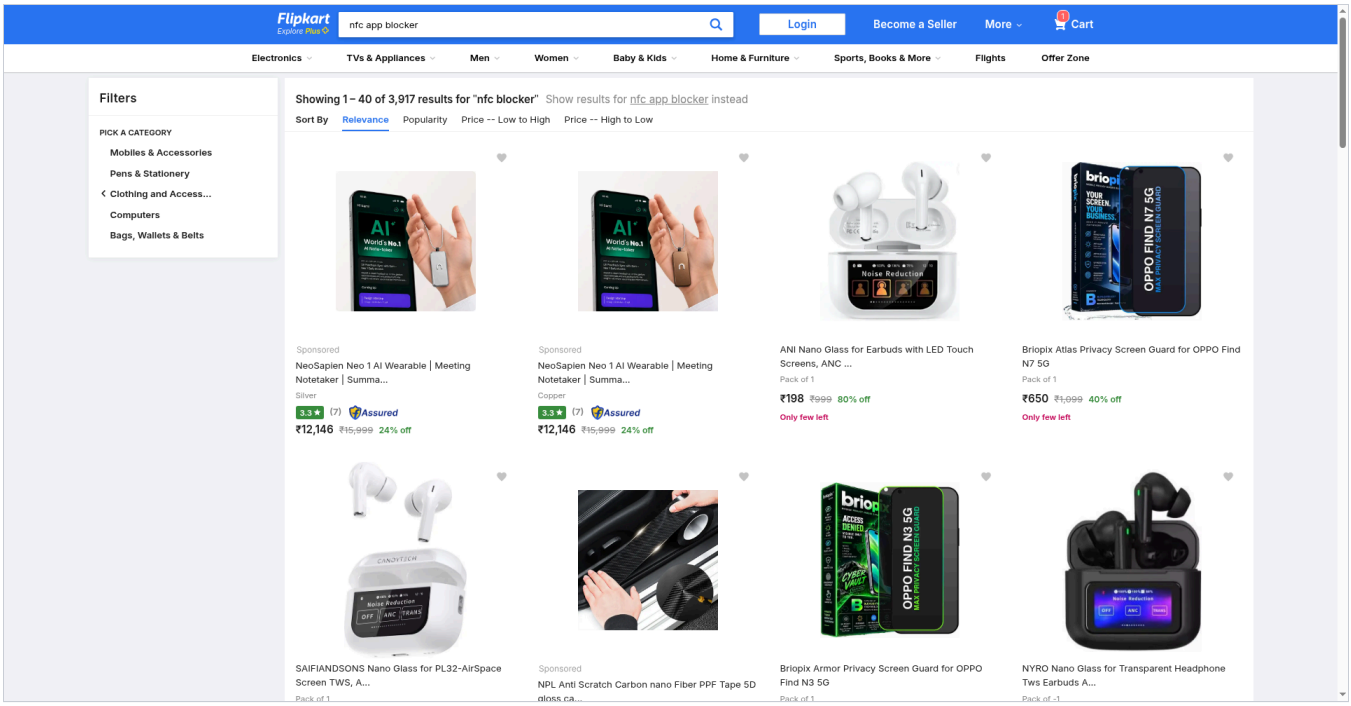

Fig. 9 - Flipkart: re-run of the "nfc app blocker" search, same auto-rewrite to "nfc blocker".

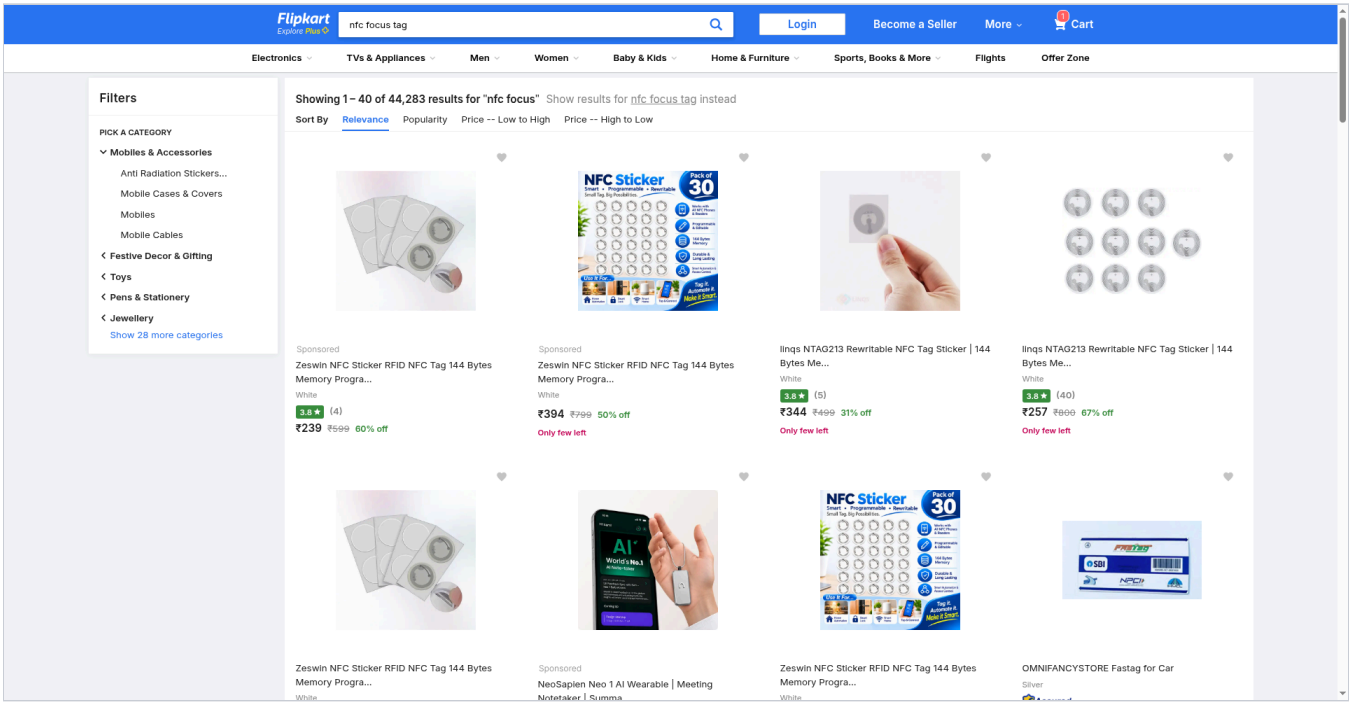

Fig. 10 - Flipkart: typed "nfc focus tag", auto-rewritten to "nfc focus" (44,283 results). Page 1 shows blank NFC stickers (Zeswin ₹239; linqs ₹344 / ₹257) - stickers, not blockers.

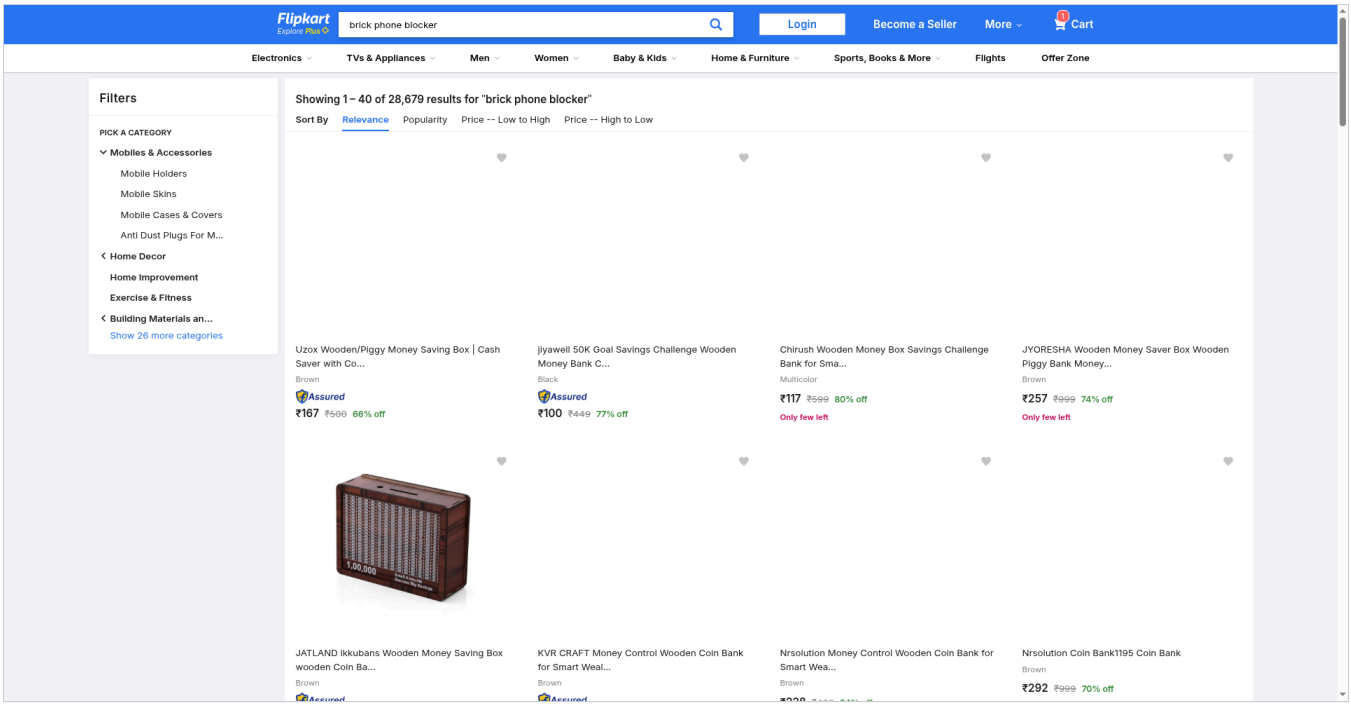

Fig. 11 - Flipkart: "brick phone blocker" searched as typed (28,679 results); page 1 shows piggy banks / money boxes.
